Preface	xv
<b>1 Introduction</b>	<b>1</b>
1.1 Overview and background	2
1.2 Style and format	5
1.3 Notation, abbreviations and conventions	7
1.4 Conditions for multivariate distribution functions	11
1.4.1 Properties of a bivariate cdf $F$	11
1.4.2 Properties of a multivariate cdf $F$	11
1.5 Types of dependence	12
1.6 Copulas	12
1.7 View of statistical modelling	16
1.8 Bibliographic notes	17
1.9 Exercises	17
<b>2 Basic concepts of dependence</b>	<b>19</b>
2.1 Dependence properties and measures	20
2.1.1 Positive quadrant and orthant dependence <sup>◦</sup>	20
2.1.2 Stochastic increasing positive dependence	21
2.1.3 Right-tail increasing and left-tail decreasing	22
2.1.4 Associated random variables	22
2.1.5 Total positivity of order 2	23
2.1.6 Positive function dependence	25
2.1.7 Relationships among dependence properties	25
2.1.8 Max-infinite and min-infinite divisibility	30
2.1.9 Kendall's tau and Spearman's rho <sup>◦</sup>	31
2.1.10 Tail dependence <sup>◦</sup>	33
2.1.11 Examples	33
2.2 Dependence orderings	35
2.2.1 Concordance ordering <sup>◦</sup>	36
2.2.2 Axioms for a bivariate dependence ordering	38

2.2.3	Axioms for a multivariate dependence ordering	38
2.2.4	More SI bivariate ordering *	40
2.2.5	More $TP_2$ bivariate orderings *	44
2.2.6	Positive function dependence ordering *	46
2.2.7	Examples: bivariate	48
2.2.8	Examples: multivariate	50
2.3	Bibliographic notes	52
2.4	Exercises	53
2.5	Unsolved problems	56
<b>3</b>	<b>Fréchet classes</b>	<b>57</b>
3.1	$\mathcal{F}(F_1, \dots, F_m)^\circ$	58
3.2	$\mathcal{F}(F_{12}, F_{13})$	65
3.3	$\mathcal{F}(F_{12}, F_3)$	66
3.4	$\mathcal{F}(F_{12}, F_{13}, F_{23})$	68
3.4.1	Bounds	69
3.4.2	Uniqueness	72
3.4.3	Compatibility conditions	75
3.5	$\mathcal{F}(F_{123}, F_{124}, F_{134}, F_{234})^*$	78
3.6	$\mathcal{F}(F_{ij}, 1 \leq i < j \leq m)^*$	79
3.7	General $\mathcal{F}(F_S : S \in \mathcal{S}^*)$ , $\mathcal{S}^* \subset \mathcal{S}_m^*$	80
3.8	Bibliographic notes	80
3.9	Exercises	81
3.10	Unsolved problems	82
<b>4</b>	<b>Construction of multivariate distributions</b>	<b>83</b>
4.1	Desirable properties of a multivariate model $^\circ$	84
4.2	Laplace transforms and mixtures of powers $^\circ$	85
4.2.1	Dependence properties *	89
4.2.2	Frailty and proportional hazards	97
4.3	Mixtures of max-id distributions	98
4.3.1	Max-infinite divisibility conditions	101
4.3.2	Dependence properties *	102
4.4	Generalizations of functional forms	108
4.5	Mixtures of conditional distributions	111
4.5.1	Dependence properties *	115
4.6	Convolution-closed infinitely divisible class $^\circ$	118
4.7	Multivariate distributions given bivariate margins	120
4.7.1	Regression with binary variables	121
4.7.2	Maximum entropy given bivariate margins *	123
4.8	Molenberghs and Lesaffre construction	124
4.9	Spherically symmetric families: univariate margins	128

4.10	Other approaches	134
4.11	Bibliographic notes	134
4.12	Exercises	135
4.13	Unsolved problems	138
<b>5</b>	<b>Parametric families of copulas</b>	<b>139</b>
5.1	Bivariate one-parameter families <sup>◦</sup>	139
5.2	Bivariate two-parameter families	149
5.3	Multivariate copulas with partial symmetry	155
5.4	Extensions to negative dependence *	157
5.5	Multivariate copulas with general dependence	163
5.6	Bibliographic notes	166
5.7	Exercises	166
5.8	Unsolved problems	168
<b>6</b>	<b>Multivariate extreme value distributions</b>	<b>169</b>
6.1	Background: univariate extremes	169
6.2	Multivariate extreme value theory	172
6.2.1	Dependence properties	177
6.2.2	Extreme value limit results	179
6.3	Parametric families	182
6.3.1	Dependence families	182
6.3.2	Other parametric families	191
6.4	Point process approach *	194
6.5	Choice models	197
6.6	Mixtures of MEV distributions *	202
6.7	Bibliographic notes	206
6.8	Exercises	207
6.9	Unsolved problems	208
<b>7</b>	<b>Multivariate discrete distributions</b>	<b>209</b>
7.1	Multivariate binary	209
7.1.1	Bivariate Bernoulli and binomial <sup>◦</sup>	210
7.1.2	General multivariate Bernoulli <sup>◦</sup>	211
7.1.3	Exchangeable mixture model <sup>◦</sup>	211
7.1.4	Extensions to include covariates	215
7.1.5	Other exchangeable models	216
7.1.6	Mixture models <sup>◦</sup>	219
7.1.7	Latent variable models <sup>◦</sup>	221
7.1.8	Random effects models	224
7.1.9	Other general dependence models	225
7.1.10	Comparisons	226

7.2	Multivariate count	232
7.2.1	Background for univariate count data <sup>◦</sup>	232
7.2.2	Multivariate Poisson <sup>◦</sup>	233
7.2.3	Mixture models and overdispersed Poisson <sup>◦</sup>	234
7.2.4	Other models	236
7.3	Multivariate models for ordinal responses <sup>◦</sup>	236
7.4	Multivariate models for nominal responses	237
7.5	Bibliographic notes	239
7.6	Exercises	240
7.7	Unsolved problems	242
<b>8</b>	<b>Multivariate models with serial dependence</b>	<b>243</b>
8.1	Markov chain models	244
8.1.1	Stationary time series based on copulas <sup>◦</sup>	244
8.1.2	Binary time series	246
8.1.3	Categorical response	248
8.1.4	Extreme value behaviour	249
8.2	$k$ -dependent time series models	253
8.2.1	1-dependent series associated with copulas	253
8.2.2	Higher-order copulas	255
8.2.3	1-dependent binary series	256
8.3	Latent variable models	258
8.4	Convolution-closed infinitely divisible class	259
8.4.1	Stationary AR(1) time series <sup>◦</sup>	259
8.4.2	Moving average models	264
8.4.3	Higher-order autoregressive models	265
8.4.4	Models for longitudinal data	268
8.4.5	Other non-normal time series models	269
8.5	Markov chains: dependence properties *	270
8.6	Bibliographic notes	280
8.7	Exercises	281
8.8	Unsolved problems	282
<b>9</b>	<b>Models from given conditional distributions</b>	<b>283</b>
9.1	Conditional specifications and compatibility conditions	283
9.2	Examples	285
9.2.1	Conditional exponential density	285
9.2.2	Conditional exponential families	288
9.2.3	Conditional binary: logistic regressions	290
9.2.4	Binary: other conditional models	294
9.3	Bibliographic notes	296

CONTENTS	xiii
9.4 Exercises	296
9.5 Unsolved problems	296
<b>10 Statistical inference and computation</b>	<b>297</b>
10.1 Estimation from likelihoods of margins <sup>o</sup>	299
10.1.1 Asymptotic covariance matrix	301
10.1.2 Efficiency	305
10.1.3 Estimation consistency	306
10.1.4 Examples	307
10.2 Extensions	311
10.2.1 Covariates	311
10.2.2 Parameters common to more than one margin	315
10.3 Choice and comparison of models	316
10.4 Inference for Markov chains	317
10.5 Comments on Bayesian methods	319
10.6 Numerical methods	319
10.7 Bibliographic notes	321
10.8 Exercises	321
10.9 Unsolved problems	322
<b>11 Data analysis and comparison of models</b>	<b>323</b>
11.1 Example with multivariate binary response data	324
11.2 Example with multivariate ordinal response data	336
11.3 Example with multivariate extremes	344
11.4 Example with longitudinal binary data	352
11.5 Example with longitudinal count data	357
11.6 Example of inference for serially correlated data	369
11.7 Discussion	371
11.8 Exercises	372
<b>Appendix</b>	<b>373</b>
A.1 Laplace transforms	373
A.2 Other background results	377
A.2.1 Types of distribution functions and densities	377
A.2.2 Convex functions and inequalities	379
A.2.3 Maximum entropy	380
A.3 Bibliographic notes	382
